

Sir: XM Radio may very well be the best innovation to come along in over a decade. I am a truck driver and need to stay abreast of changing weather conditions and traffic changes. XM Radio has a great service that concentrates on these very issues. Other stations merely give lip service to these issues. XM has found a vital need of drivers around the country and filled it. The fact that their programming is nationwide and never fades out goes without saying.

XM Radio has taken over the trucking industry and is on the verge of overtaking CB Radio as the main communicating tool for trucks. Please don't let any lobbying efforts by the National Association of Broadcasters put a damper on the super programming of XM Radio.

Thanks for your attention to this matter.
